Langley Washington

Please Check It Out And Let Us Know What You Think

Recently the City of Langley received a Grant to replace the current sodium streetlights with LED lights. The costs will be fully covered by the Grant. The LED lights require substantially less energy to operate and therefore, help both with our sustainability efforts and saving money in the City Operating Expenses.

However, we have heard from other communities that the new bulbs may create a light that is too harsh.

So, we have had one bulb installed at the corner of 3rd and Park Streets so that you may see for yourself what it looks like in operation.

There may be other bulb options that allow us to get the energy savings without creating visual problems if this bulb is not suitable.

We would appreciate your feedback - send it to mayor@langleywa.org.
